

PSYC 350 Statistics Cheat Sheet

Statistical test	When To Use (# and Type of IV)	When To Use (# and Type of DV)	Example #1	Example #2
Pearson correlation <i>r</i>	One continuous IV	One continuous DV	Is there a positive linear relationship between number of close friends a person has and their college GPA , such that those with more friends would have a higher GPA?	Does a person's self-reported rating of "social coolness" decrease as their age increases?
Chi-Square Test of Independence	One categorical independent variable with any # of levels	One categorical dependent variable with any # of levels	Are students in the Greek system more likely to smoke cigarettes than students who are not in a fraternity or sorority?	Are people with a Type A personality more likely to get straight A's than people with a Type B personality?
Between-Subjects One-Way ANOVA	One categorical IV with 2 levels (2 separate groups of people)	One continuous dependent variable	Do students who vote in the ASUN elections have a higher GPA on average than those who do not vote in school elections?	Do Nebraska football fans tend to drink more alcohol on average during game days when the Huskers win compared to when they lose?
Within-Subjects One-Way ANOVA	One categorical IV with 2 levels (same people measured 2 times)	One continuous dependent variable	Did our sample's level of depression scores improve from before to after therapy?	Did our sample's average GPA change between their first year in college and their second year ?

Statistical test selection by number and types of variables
